## Amendments to the Claims:

The following listing of claims will replace all prior versions, and listings, of claims in the application:

1. (Currently Amended) An optical fiber probe for diagnosing a combustion condition in a combustor, comprising:

an optical fiber;

a first protective pipe holding the optical fiber therein for protection; protection, the first protective pipe having a front part and a base part, and the first protective pipe being formed in a length such that the base part of the first protective pipe is cooled by natural cooling at temperatures substantially equal to an ordinary temperature; and

a collet attached to a the front part of the first protective pipe;

wherein an adhesive is filled in a the base part of the first protective pipe to form a sealing plug, and

the optical fiber is movable relative to the collet during diagnosis of the combustion condition.

- 2. (Canceled)
- 3. (Original) The optical fiber probe according to claim 1 further comprising a second protective pipe covering the optical fiber and fitted in the first protective pipe.
  - 4. (Canceled)
- 5. (Previously Presented) The optical fiber probe according to claim 1, wherein the optical fiber and the collet are heat-resistant.
- 6. (Previously Presented) The optical fiber probe according to claim 1, wherein the optical fiber extends through the collet.
